SUQUAMISH CARES OPIOID TREATMENT PROGRAM

Security Plan

Prepared in support of the City of Poulsbo Conditional Use Permit Application

Site: 19950 7th Avenue NE, Poulsbo, WA 98370
Prepared on behalf of: The Suquamish Tribe
Applicant of record: Rice Fergus Miller (RFM)
Date: June 24, 2026

---

1. Purpose and Scope

This Security Plan is submitted in support of the Conditional Use Permit (CUP) application for the Suquamish CARES facility at 19950 7th Avenue NE in Poulsbo. It outlines, at a general site-management level, how the site will be managed to ensure safety and to minimize off-site impacts on the surrounding neighborhood. The facility is an Essential Public Facility that serves a regional public-health need.

This document addresses the site-security elements identified in the City of Poulsbo Pre-Application Summary Letter — exterior lighting, camera coverage, staff presence, monitoring and response, loitering prevention, and safe building access. Internal medication-handling and controlled-substance security protocols are governed by a separate federal and state licensure process, as described in Section 10, and are not part of this land-use submittal.

2. Site Security Approach

Security at the site is achieved through a layered, common-sense approach: a well-lit and clearly organized site; camera coverage of the building entrances, exits, and parking areas; the continuous presence of staff during operating hours; routine monitoring of on-site activity; and a designated on-site contact to coordinate security and respond to concerns. Together these measures are intended to keep activity orderly and contained on-site and to avoid spillover effects on neighboring properties.

3. Exterior Lighting

The facility provides exterior lighting at building entrances, exits, walkways, and the parking area to support visibility and safety during early-morning and evening operating hours. Lighting is designed to illuminate the site adequately while directing light downward and avoiding unnecessary light spillover onto adjacent properties. The specific lighting design is shown on the lighting plan prepared by the project architect and is provided as part of the application materials.

4. Camera Coverage

The facility provides security camera coverage of the building entrances, exits, and parking areas. Cameras support monitoring of on-site activity and provide a recorded record that can assist staff and, where appropriate, local law enforcement. Camera placement is shown on the site and security plans prepared by the project architect.

5. Staff Presence During Operating Hours

Staff are present on-site throughout all operating hours — Monday through Saturday, 5:30 a.m. to 6:00 p.m. Staff presence is the primary day-to-day security measure: personnel are on-site continuously during operating hours, including the early-morning peak period, and observe and manage the entrances, waiting area, and parking area as part of normal operations.

6. Monitoring and Response to On-Site Activity

Staff monitor on-site activity at the entrances, the indoor waiting area, and the parking area during operating hours, supported by the exterior lighting and camera coverage described above. Staff are responsible for keeping activity orderly, addressing concerns promptly, and contacting local emergency services where circumstances warrant. Any operational or security concern may be directed to the designated on-site contact (Section 9) for timely response.

7. Loitering Prevention

The site is managed to prevent loitering on-site and in the surrounding area. Because all patient waiting occurs indoors and most visits are brief, there is no need for patients to gather outside the building. Staff presence, exterior lighting, camera coverage, and clear, unobstructed building access work together to discourage loitering. Staff monitor the entrances and parking area during operating hours and encourage prompt, orderly arrivals and departures, and any reports of loitering are directed to the designated on-site contact for prompt response.

8. Clear and Safe Building Access

Clear and safe access to the building is maintained at all times during operating hours. Entrances, walkways, and accessible routes are kept unobstructed, well-lit, and free of hazards, and the parking area is organized to support safe pedestrian and vehicle movement. Building access is managed so that patients, staff, and visitors can enter and exit safely and so that emergency access is preserved.

9. Designated On-Site Contact

Scott Crowell, DCD Director, is the Tribe’s designated on-site contact responsible for security coordination and for responding to concerns regarding the facility. Mr. Crowell serves as the responsible project and site point of contact for the Tribe and is available to the City and to neighbors to receive and address site-security concerns.

10. Relationship to the Separate Federal and State Licensure Process

This Security Plan is a land-use document scoped to site security and off-site impact. Detailed security protocols for the facility’s clinical operations — including controlled-substance storage and handling, medication security, diversion control, and patient confidentiality — are being developed and will be submitted to the U.S. Drug Enforcement Administration (DEA), the Substance Abuse and Mental Health Services Administration (SAMHSA), and the Washington State Department of Health (WA DOH) as part of the Tribe’s separate federal and state licensure process. Those protocols are governed by that process and are not part of this municipal land-use submittal.
