

City of Poulsbo

Engineering Division-Memorandum

To: Engineering Staff
From: Michael Bateman, PE
Subject: Survey Datum Requirements
Date: November 6, 2017

Regarding survey datum requirements for City and developer projects:

It is of the utmost importance for City infrastructure to have correct continuity between projects for line and grade within the City of Poulsbo. This is particularly important for the City roadway network and gravity sewer system.

For all federally funded projects, per notice published in the federal register Vol. 58, No. 120 on Thursday, June 24, 1993 use of the North American Vertical Datum of 88 (NAVD88) is required. Most of the City's larger road projects are federally funded through various grant programs.

Therefore, in order to ensure continuity between all projects within the city of Poulsbo, including both City and developer projects, the Engineering Department will from here forward require all projects with City infrastructure to use NAVD88 as the survey datum for vertical control.
