REQUEST FOR PROPOSALS

ADA Sidewalk Assessment Tool

QUESTIONS & ANSWERS

Question: The RFP describes both a data collection tool and a software component. Is the primary objective a GIS based data collection and management solution or acquisition of specialized equipment which facilitates the collection of compliance measurements in the field?

Response: The City is primarily interested in the outcomes – a GIS based inventory of our sidewalk condition relating to ADA compliance which allows the City leverage this information into actionable items making a difference within our community.

Question: The RFP describes a city staff led effort to collect the data. Would the City also consider a consultant led effort for data collection?

Response: The City would consider a consultant led approach in order to collect the data for the assessment assuming it can be accomplished within the established budget for the project.
